

"I highly recommend Imagine Tomorrow to any parent looking to give their child a jump start on tools and skills they will use throughout their lifetime!"

Dan, father of Gabriella

Overview

Imagine Tomorrow, Computer Classes for Kids, is now offering a solution for schools that take pride in having the highest quality programs for their students. An Imagine Tomorrow certified teacher can come to your school each week, ready to teach classes featuring our most popular curriculum and software loaded on our own laptops. This package is the perfect way for schools to easily expand their computer enrichment program without requiring additional investments in new technology or staff.

About the Program

Imagine Tomorrow teaches more than just computers; every class brings new experiences designed to teach our young students how to think creatively, express their ideas, and apply the skills they are learning to solve problems and accomplish their goals. Our unique approach takes fundamental literacy concepts and brings them to life for children by immersing them in a story where they get to become the main character. Every class combines interactive video and software in a proprietary format that allows children to work in a group setting, yet advance at their own pace. Created to incorporate core literacy and technology concepts, our program is designed to prepare all young children with the skills necessary to succeed in their future.

SPECIFICATIONS

- **Imagine Tomorrow Certified Teachers:** We send an Imagine Tomorrow Certified Teacher to teach the classes at your location.

- **A Nationally-Recognized Program:** Imagine Tomorrow's own Custom Curriculum, which has received national recognition, is aligned to the highest Early Childhood standards. Every class, children are taken on a new Adventure that emphasizes the power of Digital and Mobile technology. Classes can be either 30 minutes or 1 hour.

- **One Computer Per Child:** We bring five (5) of our own wireless laptops fully loaded with the latest Imagine Tomorrow software. The class may take place in a very small enclosed or blocked off space with 1 power outlet, and enough desk or table space with seating for up to five (5) children per class and one teacher.

- **Imagine Tomorrow Software:** We provide a new proprietary software program for each class that allows students to have a first-hand experience in original Learning Adventures. Each software activity is designed to adjust to a child's individual ability level and encourages them to build technology and academic skills by applauding their successes.

- **Exclusive Online Access to Website:** We provide a password to the Imagine Tomorrow Online Adventure Journal to allow participating students to share their adventures with parents, friends, and family. The Imagine Tomorrow Adventure Journal includes: a lesson summary describing goals that were accomplished, a sampling of online computer activities that correspond to the software used that day, and questions and answers designed for reinforcement at home.

- **Parent Materials:** We provide necessary Parent Materials, such as brochures, curriculum information, registration forms, and flyers, to encourage parents to participate in the program. Imagine Tomorrow also posts information about the classes on our website.
